

### Meeting Agenda:

- Progress since last meeting and what you plan to finish before the end of the project
- Reassigning work or getting extra help
- Meeting times to practice the presentation
- Questions or concerns

### Minutes for our Meetings:

#### Monday - 04/26:

This meeting everyone had a part of the project they were working on. The majority of the project is already finished and our team is now working through small errors and styling. There were no major issues that were going to keep us from finishing at this point. Genesis needed help implementing the filters, but has already asked the TA for help with that. Everyone else is working on improving the API features. We also made a plan to all be finished by Friday so we can have time to deploy on Heroku.

#### Wednesday - 04/28:

We have made big changes to the project. The speech API is almost working, the Dictionary API just needs to fix errors in the code returning extra information we don't need, and the Youglish API is finished. Genesis figured out the filtering method was fixed and is now implemented into the design. Kaiyuan has figured out the deployment and we are just waiting for the final changes to be made. The schedule remains the same, finish everything and deploy by Friday.

#### Friday - 04/30:

This was our final meeting, we discussed our progress and everyone seemed to be basically finished. The only had a few bugs related to the Dictionary API and the UI needed to be finished. There were a few questions related to deployment, but there weren't any major issues.
